Content Providers

NINJIO

70+ Courses   **13** Topics   5 min   French & Spanish courses

NINJIO has a new episode every month covering subjects related to current events. Episodes follow a story arc with repeated characters so it feels like something you'd binge on Netflix until it shames you by asking if you're still watching.

✓ GDPR   ✓ HIPAA   ✓ PCI DSS

*(Longer form content)*

Why users like it:

- Episodes are short and engaging
- You learn something without feeling lectured
- The story sticks in your head, which means the lesson does too
- It's like Sesame Street for grown ups

SOCIALPROOF SECURITY

8 Courses   **7** Topics   5 min or less

SocialProof Security content is live-action and contemporary, involving talent from Hamilton, MTV, American Idol, and Tik Tok to make it engaging and fun. Many of the courses are from the view of white-hat hacker, Rachel Tobac, showing how she would approach social engineering to teach end-users what to watch out for.

Why users like it:

- It feels modern, real and believable
- The content and lessons stick because it's based on how people actually behave rather than abstract textbook theory
- Stories are told in fun, memorable formats like music videos

goldphish

45+ Courses   **14** Topics   5-10 min   French & Spanish courses

Goldphish is **NCSC-accredited** and uses friendly animated characters (like you might see in webcomics like Cyanide and Happiness) and bite-sized lessons that simplify complex topics. It is especially strong for teams who prefer visual storytelling and need multilingual options.

✓ GDPR   ✓ HIPAA   ✓ PCI DSS

Why users like it:

- Easy to grasp and easy to remember
- Nothing feels intimidating
- Strikes the balance between helpful and fun (which, obviously, we at Phin wholeheartedly approve of. Fun, helpful bunch that we are.)

CFISA — The Center for Information Security Awareness

21 Courses **13** Topics **~10 min**

✓ HIPAA ✓ PCI DSS

CFISA trainings are in a traditional slideshow format with built in short form assessments. They are Phin's longest and most in-depth set of single-use courses and are certified to meet NIST-800 53 standards by the State of Texas.

Why users like it:

- Practical and reassuring
- Great for users who want calm, structured training that's straight to the point

OWASP

11 Courses **10 min** ✓ OWASP Top 10

OWASP brings technical accuracy to topics that developers, software teams and product engineers deal with daily. These lessons dig into vulnerabilities and secure coding practices in a way that normal training often avoids. Like a cybersecurity Wikipedia, OWASP Foundation relies on volunteers and is available to all. There's a LOT of content, so Phin's job is to give you and your clients the best, most applicable stuff.

Why users like it:

- Clear and authoritative
- Respects the audience's technical skills and knowledge
- Developers get the depth they actually need, not a high level summary

HABITU8

21 Courses **11** Topics **~5 min**

Part of Arctic Wolf since 2021, Habitu8 blends live action and animation into short, relatable training moments with high production values – they compare themselves to the big boys of film and television in terms of production quality, and it's easy to see why.

Why users like it:

- Modern and quick
- Users come away thinking about the concept rather than the video itself, which is the ideal result

"After switching to Phin, **we have gotten much better feedback from [end-users].** They enjoy the content and engage more with it. Phin keeps the content much shorter, which is better for the end-user."

— *Dale Schwer, Rake Digital*
